Kyrgyzstan: Animal Health Export Restrictions for U.S. Food Products Intended for Human Consumption

Last Modified:

This page lists animal health-related export restrictions on U.S. animal products intended for human consumption. Export certification for these products is coordinated among multiple Federal agencies.

While APHIS attests to the animal health status of the region of origin (such as a U.S. State, county, or town), other Federal agencies, such as USDA's [Food Safety and Inspection Service](#) and [Agricultural Marketing Service](#), endorse and issue the export certificates.

Products listed on this page may also be subject to additional entry requirements imposed by USDA or other Federal agencies. Exporters are encouraged to consult all relevant authorities to ensure full compliance.

Poultry and Poultry Products

Restrictions apply to the following:

- All fresh or frozen poultry and poultry products produced before January 1, 2017.
- Fresh or frozen poultry products from the following affected areas shipped during the dates indicated.
- Poultry meat and egg products that are not heat treated per [procedures for the inactivation of avian influenza viruses](#).

These products are ineligible for export to Kyrgyzstan.

■

Procedures for the Inactivation of High Pathogenicity Avian Influenza Viruses in Meat Products From Poultry

Core Temperature (°C)	Time
60	507 seconds
65	42 seconds
70	3.5 seconds
73	0.51 seconds

Procedures for the Inactivation of High Pathogenicity Avian Influenza Viruses in Egg Products From Poultry

Product	Core Temperature (°C)	Time
Whole egg	60	188 seconds
Whole egg blends	60	188 seconds
Whole egg blends	61.1	94 seconds
Liquid egg white	55.6	870 seconds
Liquid egg white	56.7	232 seconds
