                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p><b>II.1. The animals described in this certificate:</b></p> <p><b>II.1.1.</b> <i>Come from holdings which have been free from any official prohibition on health grounds, for the last 42 days in the case of brucellosis, for the last 30 days in the case of anthrax, for the last six months in the case of rabies, and have not been in contact with animals from holdings which did not satisfy these conditions;</i></p> <p><b>II.1.2.</b> <i>Have not received: (for breeding animals)</i></p> <ul style="list-style-type: none"> <li>- <i>any stilbene or thyrostatic substances.</i></li> <li>- <i>oestrogenic, androgenic, gestagenic or <math>\beta</math>-agonist substances for purposes other than therapeutic or zootechnic treatment (as defined in Directive 96/22/EC).</i></li> </ul> <p><b>III. Health status of the exporting country:</b></p> <p><b>III.1.</b> <i>The animals come from the country which, on the date of issuing this certificate:</i></p> <ul style="list-style-type: none"> <li>(a) <i>Has been free for 12 months from contagious bovine pleuroneumonia.</i></li> <li>(b) <i>On the establishment from which the animals originate, bluetongue and foot-and-mouth disease have not been officially reported for 12 months.</i></li> </ul> <p><b>IV. Health status of the herd of origin:</b></p> <p><b>IV.1.</b> <i>The animals originated from establishments or states officially free from brucellosis and tuberculosis.</i></p> <p><b>IV.2.</b> <i>The animals have remained since birth or at least 40 days before dispatch in the above defined holding(s) and around which, in an area with 10 Km radius, there has been no case/outbreak of foot-and-mouth disease, pest des petits ruminants, lumpy skin disease, and vesicular stomatitis during the previous 40 days.</i></p> <p><b>IV.3.</b> <i>Regarding bluetongue disease:</i></p> <ul style="list-style-type: none"> <li>- <i>The bovine animals were isolated at least 30 days and were subjected, with negative results, to either a serological test to detect antibodies or PCR to the BTV group;</i></li> </ul> <p style="padding-left: 40px;"><i>AND</i></p> <ul style="list-style-type: none"> <li>- <i>Were protected from Culicoides attacks for at least 30 days prior to shipment and during transportation to the place of shipment.</i></li> </ul> <p><b>IV.4.</b> <i>The animals were not destined to be killed under a national eradication program of contagious disease.</i></p> <p><b>IV.5.</b> <i>The animals for export originate from the farms which have been clinically free of paratuberculosis (Johne's disease) and bovine babesiosis for the last 12 months.</i></p> <p><b>IV.6.</b> <i>The country of origin is considered as negligible risk by WOA and is carrying out an epidemiological program for eradication and surveillance of Transmissible Spongiform Encephalopathies in accordance with the WOA recommendations. Cattle to be exported shall come from farms where BSE classical form has not been officially detected in the last 3 years.</i></p> <p><b>IV.7.</b> <i>According to the legislation in force in the United States, the use of mammalian proteins (except from milk, milk-based products and colostrum, eggs and egg products, gelatin derived from non-ruminants, fishmeal where they are used for the production of milk replacers used solely in the feeding of young ruminants) is forbidden for feeding ruminants.</i></p> <p><b>IV.8.</b> <i>Regarding epizootic hemorrhagic disease:</i></p> <ul style="list-style-type: none"> <li>- <i>The animals showed no clinical signs of epizootic hemorrhagic disease the day of inspection.</i></li> <li>- <i>The animals were protected against Culicoides while transhipped through from isolation to the port of embarkation.</i></li> <li>- <i>and</i></li> </ul> <p style="padding-left: 40px;"><i>Either <sup>(1)</sup></i></p> <ul style="list-style-type: none"> <li>- <i>The animals were kept on a farm where no outbreaks of epizootic hemorrhagic disease have been reported for at least 60 days before shipment.</i></li> </ul> <p style="padding-left: 40px;"><i>or <sup>(1)</sup></i></p> <ul style="list-style-type: none"> <li>- <i>The animals were kept on premises or farm protected from vectors for at least 28 days and were negative on a serological test for the detection of antibodies against the virus of epizootic hemorrhagic disease; this test was carried out during pre-export isolation.</i></li> </ul> <p style="padding-left: 40px;"><i>or <sup>(1)</sup></i></p> <ul style="list-style-type: none"> <li>- <i>The animals were kept on premises or farm protected from vectors for at least 14 days and were negative to an antigen test; this test was carried out during pre-export isolation.</i></li> </ul> <p><b>V. Health status of animals:</b></p> <p><b>V.1.</b> <i>The animals have been kept in isolation between the date ..... and ..... under the control of a USDA accredited veterinarian for at least 30 days prior to export and found to be clinically free from any symptom of infectious or contagious diseases.</i></p> <p><b>V.2.</b> <i>They have remained since birth or at least 40 days before dispatch in the holding(s) described under box reference I.11. in and around which, in an area with a 150 Km radius, there has been no case/outbreak of the diseases referred to in point III.1.a. or lumpy skin disease during the previous 60 days.</i></p> <p><b>V.3.</b> <i>The animals to be exported have been tested for the following animal diseases with negative results within the isolation period:</i></p> <ul style="list-style-type: none"> <li>- <i>Brucellosis using the Rose Bengal Test, Serum agglutination or complement fixation test or buffered Brucella antigen test (e.g., card test) or ELISA or fluorescence polarisation assay <sup>(1)</sup>.</i></li> <li>- <i>Tuberculosis using Tuberculin test.</i></li> </ul> <p><b>V.4.</b> <i>With regards to Bovine Spongiform Encephalopathy (BSE):</i></p> <ul style="list-style-type: none"> <li>- <i>The animals to be exported are identified by a permanent identification system enabling them to be traced back to the dam and herd of origin and this permanent identification system demonstrate that they are not exposed bovine animals.</i></li> <li>- <i>The animals shall have been born after the issuance date of the decision imposing the ban on use of animal feed additives (meat flour, bone, greaves from ruminants), in addition to an effective implementation of this decision within the exporting country.</i></li> <li>- <i>Exported cattle were born from mothers free of BSE disease.</i></li> </ul> |

V.5. The animals to be exported have been found to be clinically free from ringworm, scabies, pox and ticks.

V.6. The animals were treated against endo and ectoparasites using approved drugs at least 10 days prior to export.

V.7. The animals have been examined clinically before being shipped and they are free from any clinical signs of infectious or contagious disease.

VI. Animal transport attestation :

VI.1. I, the undersigned USDA accredited veterinarian, hereby certify, that the animals described above have been treated before and at the time of loading in accordance with the U.S. Code of Federal Regulations, in particular in regard to watering and feeding, and the animals are fit for the intended transport.

VI.2. The animals were protected from *Culicoides* attacks at all times when transiting through an infected zone for bluetongue disease.

VI.3. Avian Influenza (HPAI) Testing in Cattle

- The competent veterinary authority certifies that a minimum of 30 head of the cattle described in this consignment were tested for highly pathogenic avian influenza (HPAI), including H5N1 viruses. For consignments with fewer than 30 head of cattle, every animal must be tested.
- Testing was performed using real-time reverse transcription polymerase chain reaction (RT-PCR) or an equivalent WOAHA-approved diagnostic method, on appropriate clinical samples (including nasal swabs and/or milk samples), within 7–14 days prior to export, and all results were negative.
- The animals showed no clinical signs consistent with avian influenza infection at the time of testing and inspection.
- All H5N1 test results attached to the consignment documents.

VI.4. New World and Old World Screwworm (*Cochliomyia hominivorax* / *Chrysomya bezziana*)

- All animals were examined by an Accredited Veterinarian and found free from screwworm infestation at all three stages.
- Those isolation facilities and transport vehicles located within infested zones were treated with approved larvicide before use.

**NOTAS / NOTES**

*Part I.*

- Box reference I.7.: provide the ISO code of the exporting country
- Box reference I.28.: Age or Date of birth (dd/mm/yyyy)
- Box reference I.28: Sex (M=male, F=female, C=castrated)
